2.0	A revision. MPPS relation addition	2000/12/18
B	Add some attributes to Radiation Dose Module	2003/12/01

0 Introduction

This application operates on the DICOM MWL Gateway device which supports TCP/IP. This application queries and retrieves the modality worklist for the information system in the network according to the DICOM standard. Moreover, procedure step information which has executed the modality is transmitted to the information system according to the DICOM standard.

Agreement to the DICOM standard of the above-mentioned application is written in this conformance statement.

1. Implementation Modal

Figure 1 shows the implementation model.

1.1 Application data flow

The application name on the DICOM MWL Gateway device is MWLQuery. The MWLQuery is the application to retrieve and to query the modality worklist.

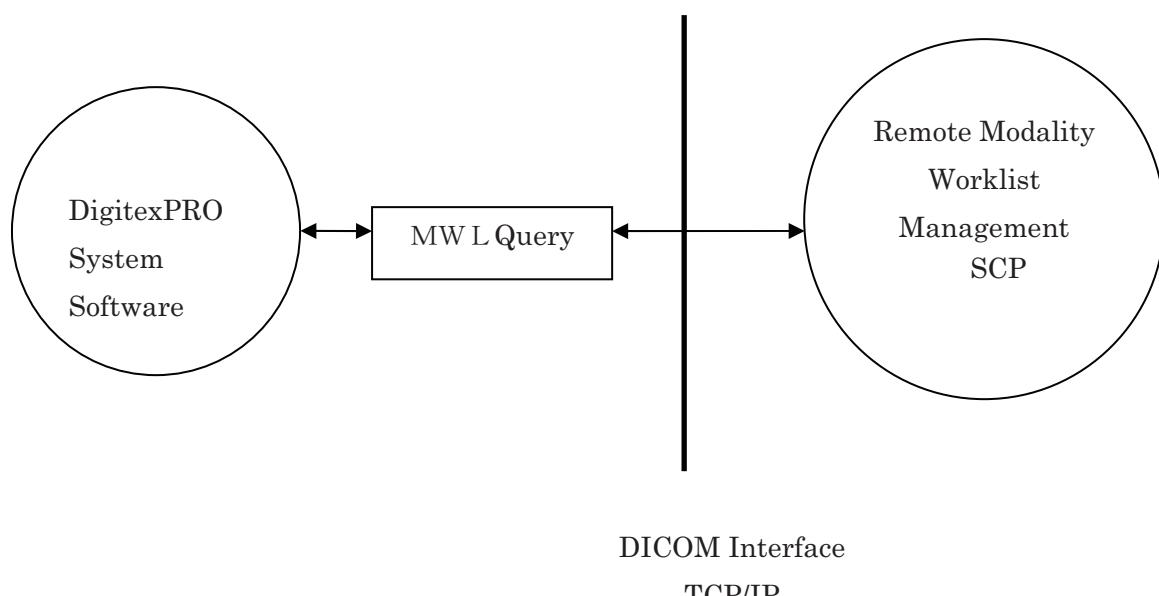

Figure 1 -1 Implementation model for MWLQuery (Only for MWM)

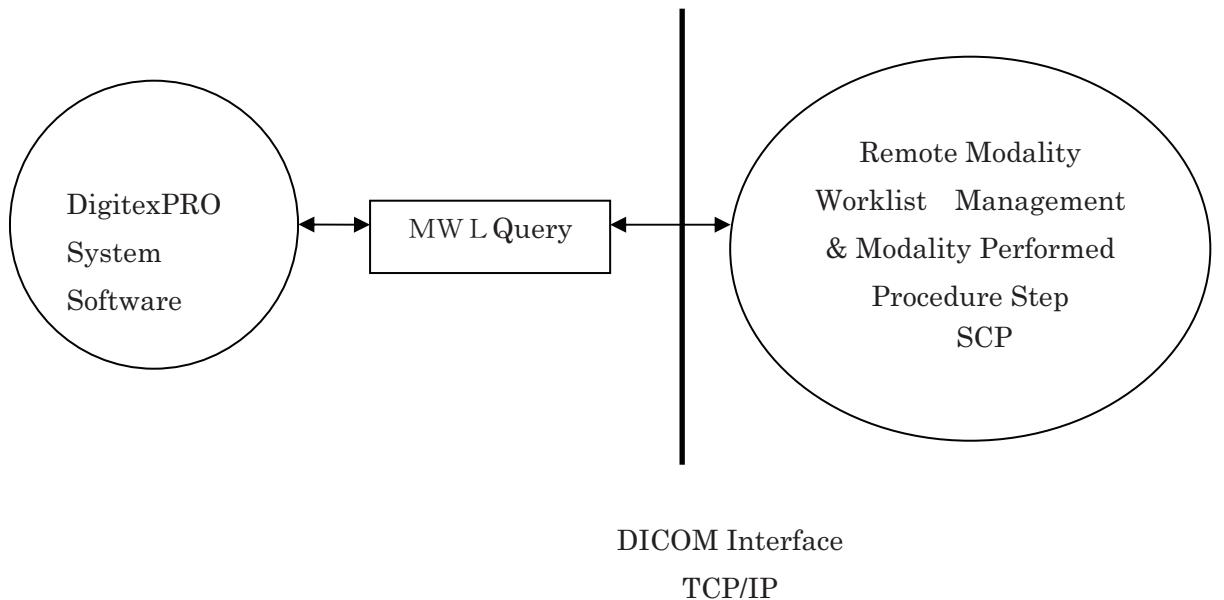

Figure 1-2 Implementation model for MWLQuery (For MWM and MPPS)

1.2 Functional definition of AE

- MWLQuery requests the DICOM Association Establishment to the SCP.
- The query condition is input, and the query request according to the query condition is sent to SCP.
- The retrieval result is received, and the received information object is transmitted to the DigitexPRO(DAR-3000) system software.
- It transmits the MPPS Information to MPPS SCP.

Note

The MPPS SCP shall be the same that the MWM SCP, when MWLQUERY operates in MPPS.

2. AE specification

2.1 MWLQuery specification

MWLQuery supports the following DICOM SOP classes as Service Class User (SCU).

SOP Class Name	SOP Class UID
Modality Worklist Information Model - FIND	1.2.840.10008.5.1.4.31
Modality Performed Procedure Step SOP Class	1.2.840.10008.3.1.2.3.3

2.1.1 Association Establishment Policies

2.1.1.1 Number of Associations

The number of associations which MWLQuery requests simultaneously is one.

The number of associations which MWLQuery transmits at the same time is one.

2.1.1.2 Asynchronous system

The MWLQuery does not operate asynchronously.

2.1.1.3 Implementation identifying information

- Implementation Class UID = “1.2.392.200036.9110.1.0.6711.199070”
- Implementation Version Name = “MWL_MPPS_GWV1.0”

2.1.2 Association Initiation Policy

After transmitting the association request, and receiving the acceptance, the MWLQuery sends the query condition.

After transmitting the association request, and receiving the acceptance, the MWLQuery sends the MPPS information to MPPS SCP.

2.1.2.1 Associated Real-World Activity

Associates real-world activity using C-FIND is that the MWLQuery retrieves the information objects from the SCP and the MWLQuery send the information objects to the DigitexPRO System Software.

The MPPS information is transmitted to the MPPS SCP.

2.1.2.2 Proposed Presentation Contexts

The MWLQuery propose the Presentation Contexts in Table 2.1.2.2-1.

Table 2.1.2.2-1 Proposed Presentation Contexts for MWLQuery

Presentation Context Table					
Abstract Syntax		Transfer Syntax		Role	Extended Negotiation
Name	UID	Name	UID		
Modality work list information model FIND	1.2.840.10008.5.1.4.31	Implicit VR LittleEndian	1.2.840.10008.1.2	SCU	None
Modality Performed Procedure Step SOP Class	1.2.840.10008.3.1.2.3.3	Implicit VR LittleEndian	1.2.840.10008.1.2	SCU	None

2.1.2.3 SOP Specific Conformance

2.1.2.3.1 SOP Specific Conformance to Modality Worklist Information Class - C-FIND

2.1.2.3.1.1 Matching Key

Scheduled Procedure Step Module

Tag	Attribute Name	VR	Match-ing Key Type	Description
(0040,0100)	Scheduled Procedure Step Sequence	SQ	R	Sequence is limited to one item.
>(0008,0060)	Modality	CS	R	Single Key (RF or XA) Matching.
>(0040,0001)	Scheduled Station AE Title	AE	R	
>(0040,0002)	Scheduled Procedure Step Start Date	DA	R	Single Key Matching.

Each matching key is configurable if it is used as the matching key or not.

2.1.2.3.1.2 Return Key

Scheduled Procedure Step Module

Tag	Attribute Name	VR	Return Key Type	Description

Billing and Material Management Module

Attribute name	Tag	Necessary type N-CREATE	Necessary type N-SET	Necessary type (final state)	N_CREATE	N_SET	Final state	Explanation
Film consumption sequence	(0040,0321)				Only Tag is transmitted.			It transmits.
> Number of films	(2100,0170)							It transmits.
> Medium type	(2000,0030)							It transmits.
> Film Size ID	(2010,0050)							It transmits.
Billing Supplies and Devices Sequence	(0040,0324)							
> Billing Item Sequence	(0040,0296)							
> Quantity Sequence	(0040,0293)							
>> Quantity	(0040,0294)							
>> Measuring Units Sequence	(0040,0295)							

2.1.2.4 Proposed Presentation Contexts

The MWLQuery proposes the presentation context shown in Table 2.1.2.2-1.

2.1.2.5 Transfer Syntax Selection Policies

MWLQuery supports only the Implicit VR Little endian Transfer Syntax.

3. COMMUNICATION PROFILES

3.1 Supported Communications Stacks

The MWLQuery provides DICOM V3.0 TCP/IP Network Communication Support as defined in PS 3.8.

3.2 TCP/IP

3.2.1 Physical Media Support

MWLQuery operates by using Ethernet(10BaseT,100BaseTX).

4. EXTENSIONS/SPECIALIZATIONS/PRIVATIZATIONS

Not Applicable.

5. CONFIGURATION

5.1 AE Title/Presentation Address Mapping

MWLQuery only uses an original configuration file related to the network.

5.2 Configurable Parameters

The establishment demand of the association is done by at least using the following parameter.

- Application Entity Title
- IP Address
- Port Number

(These parameters are configurable.)

6. SUPPORT OF EXTENDED CHARACTER SETS

MWLQuery can handle these extended character sets:

ISO-IR 87: Japanese kanji (ideographic), hiragana (phonetic),
and katakana (phonetic) characters (94 2 characters, 2-byte).
